COMPUTER SCIENCE ENGINEERING

Q. No. 1 – 25 Carry One Mark Each

1. Let X be a Gaussian random variable mean 0 and variance \( \sigma^2 \). Let \( Y=\max(X, 0) \) where \( \max(a,b) \) is the maximum of a and b. The median of Y is ____________.

Answer: (0)  
Click here to watch the video explanation

2. Consider the Karnaugh map given below, where x represents “don’t care” and blank represents 0.

```
<table>
<thead>
<tr>
<th></th>
<th>00</th>
<th>01</th>
<th>11</th>
<th>10</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>
<td>x</td>
<td>x</td>
<td></td>
<td></td>
</tr>
<tr>
<td>01</td>
<td>1</td>
<td>x</td>
<td></td>
<td></td>
</tr>
<tr>
<td>11</td>
<td>1</td>
<td>1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10</td>
<td>x</td>
<td>x</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

Assume for all inputs (a, b, c, d) the respective complements \( \overline{a}, \overline{b}, \overline{c}, \overline{d} \) are also available. The above logic is implemented 2-input NOR gates only. The minimum number of gates required is ____________.

Answer: (1)

3. The statement \( (\neg p) \Rightarrow (\neg q) \) is logically equivalent to which of the statements below?

I. \( p \Rightarrow q \)
II. \( q \Rightarrow p \)
III. \( (\neg q) \lor p \)
IV. \( (\neg p) \lor q \)

(A) I only  
(B) I and IV only  
(C) II only  
(D) II and III only

Answer: (D)
4. Consider the following table:

<table>
<thead>
<tr>
<th>Algorithms</th>
<th>Design Paradigms</th>
</tr>
</thead>
<tbody>
<tr>
<td>P. Kruskal</td>
<td>i. Divide and Conquer</td>
</tr>
<tr>
<td>Q. Quicksort</td>
<td>ii. Greedy</td>
</tr>
<tr>
<td>R. Floyd-Warshall</td>
<td>iii. Dynamic Programming</td>
</tr>
</tbody>
</table>

Match the algorithms to the design paradigms they are based on.

(A) P-(ii), Q-(iii), R-(i)
(B) P-(iii), Q-(i), R-(ii)
(C) P-(ii), Q-(i), R-(iii)
(D) P-(i), Q-(ii), R-(iii)

Answer: (C)  
[Click here to watch the video explanation]

5. A sender S sends a message m to receiver R, which is digitally signed by S with its private key. In this scenario, one or more of the following security violations can take place.

I. S can launch a birthday attack to replace m with a fraudulent message.
II. A third party attacker can launch a birthday attack to replace m with a fraudulent message.
III. R can launch a birthday attack to replace m with a fraudulent message.

Which of the following are possible security violations?

(A) I and II only
(B) I only
(C) II only
(D) II and III only

Answer: (B)  
[Click here to watch the video explanation]

6. Consider the following grammar.

P → xQRS
Q → yz | z
R → w | ε
S → y

What is FOLLOW (Q) ?

(A) {R}  
(B) {w}  
(C) {w, y}  
(D) {w, $}

Answer: (C)
7. Consider the language \( L \) given by the regular expression \((a+b)^*b(a+b)\) over the alphabet \{a,b\}. The smallest number of states needed in a deterministic finite-state automation (DFA) accepting \( L \) is _________.

Answer: (4)  

Click here to watch the video explanation

8. Consider a two-level cache hierarchy with L1 and L2 caches. An application incurs 1.4 memory accesses per instruction on average. For this application, the miss rate of L1 cache 0.1, the L2 cache experiences, on average, 7 misses per 1000 instructions. The miss rate of L2 expressed correct to two decimal places is _________.

Answer: (0.05)

9. Consider the following CPU processes with arrival times (in milliseconds) and length of CPU burst (in milliseconds) as given below:

<table>
<thead>
<tr>
<th>Process</th>
<th>Arrival time</th>
<th>Burst time</th>
</tr>
</thead>
<tbody>
<tr>
<td>P1</td>
<td>0</td>
<td>7</td>
</tr>
<tr>
<td>P2</td>
<td>3</td>
<td>3</td>
</tr>
<tr>
<td>P3</td>
<td>5</td>
<td>5</td>
</tr>
<tr>
<td>P4</td>
<td>6</td>
<td>2</td>
</tr>
</tbody>
</table>

If the pre-emptive shortest remaining time first scheduling algorithm is used to schedule the processes, then the average waiting time across all processes is ________ milliseconds.

Answer: (3)  

Click here to watch the video explanation

10. Threads of a process share  
(A) global variable but not heap.  
(B) heap but not global variables.  
(C) neither global variables nor heap.  
(D) Both heap and global variables.

Answer: (D)  

Click here to watch the video explanation
11. Let \( c_1, \ldots, c_n \) be scalars, not all zero, such that \( \sum_{i=1}^{n} c_i a_i = 0 \) where \( a_i \) are column vectors in \( \mathbb{R}^n \).

Consider the set of linear equations \( Ax = b \)

where \( A = [a_1, \ldots, a_n] \) and \( b = \sum_{i=1}^{n} a_i \). The set of equations has

(A) a unique solution at \( x = J_n \) where \( J_n \) denotes a \( n \)-dimensional vector of all 1
(B) no solution
(C) infinitely many solutions
(D) finitely many solutions

Answer: (C) 

12. Consider the C code fragment given below.

```c
typedef struct node
{
    int data;
    node* next;
} node;

void join (node* m, node* n) {
    node* p=n;
    while (p->next != NULL) {
        p = p->next;
    }
    p->next = m;
}
```

Assuming that \( m \) and \( n \) point to valid NULL-terminated linked lists, invocation of `join` will

(A) append list \( m \) to the end of list \( n \) for all inputs.
(B) either cause a null pointer dereference or append list \( m \) to the end of list \( n \).
(C) cause a null pointer dereference for all inputs.
(D) append list \( n \) to the end of list \( m \) for all inputs.

Answer: (B)

13. The n-bit fixed-point representation of an unsigned real number real X uses \( f \) bits for the fraction part. Let \( i = n - f \). The range of decimal values for X in this representation is

(A) \( 2^{-f} \) to \( 2^i \)  
(B) \( 2^{-f} \) to \( \left( 2^i - 2^{-f} \right) \)  
(C) 0 to \( 2^i \)  
(D) 0 to \( \left( 2^i - 2^{-f} \right) \)

Answer: (D)

14. Consider the following intermediate program in three-address code

\[
\begin{align*}
p &= a - b \\
q &= p \times c \\
p &= u \times v \\
q &= p + q
\end{align*}
\]

Which one of the following corresponds to a static single assignment form of the above code?

(A) \( p_1 = a - b \)  
(B) \( p_3 = a - b \)  
(C) \( p_1 = a - b \)  
(D) \( p_1 = a - b \)

Answer: (B)

15. Consider the C struct defined below:

```c
struct data {
    int marks[100];
    char grade;
    int cnumber;
};
```

The base address of student is available in register R1. The field `student.grade` can be accessed efficiently using

(A) Post-increment addressing mode, \( (R1)+ \)  
(B) Pre-decrement addressing mode, \( -(R1) \)  
(C) Register direct addressing mode, R1
(D) Index addressing mode, X(R1), where X is an offset represented in 2’s complement 16-bit representation.

Answer: (D)

16. Consider a TCP client and a TCP server running on two different machines. After completing data transfer, the TCP client calls close to terminate the connectional and a FIN segment is sent to the TCP server. Server-side TCP responds by sending an ACK which is received by the client-side TCP. As per the TCP connections state diagram (RFC 793), in which state does the client-side TCP connection wait for the FIN from the server-side TCP?

(A) LAST-ACK  (B) TIME-WAIT  (C) FIN-WAIT-1  (D) FIN-WAIT-2

Answer: (D)  
[Click here to watch the video explanation]

17. Consider the following context-free grammar over the alphabet Σ={a,b,c} with S as the start symbol.

S → abScT|abcT
T → bT|b

Which one of the following represents the language generated by the above grammar?

(A) \(\left\{ (ab)^n (cb)^n \mid n \geq 1 \right\}\)
(B) \(\left\{ (ab)^n cb^n cb^n \ldots cb^n \mid n, m_1, m_2, \ldots m_n \geq 1 \right\}\)
(C) \(\left\{ (ab)^n (cb)^m \mid m, n \geq 1 \right\}\)
(D) \(\left\{ (ab)^n (cb)^n \mid m, n \geq 1 \right\}\)

Answer: (B)  
[Click here to watch the video explanation]

18. Consider the first-order logic sentence \(F: \forall x R(x,y)\). Assuming non-empty logical domains, which of the sentences below are implied by F?

I. \(\exists y(\exists x R(x,y))\)
II. \(\exists y(\forall x R(x,y))\)
III. \(\forall y(\exists x R(x,y))\)
IV. \(\neg \exists x(\forall y \neg R(x,y))\)

19. When two 8-bit numbers \( A_7 \ldots A_0 \) and \( B_7 \ldots B_0 \) in 2’s complement representation (with \( A_0 \) and \( B_0 \) as the least significant bits) are added using a **ripple-carry adder**, the sum bits obtained are \( S_7 \ldots S_0 \) and the carry bits are \( C_7 \ldots C_0 \). An overflow is said to have occurred if

(A) the carry bit \( C_7 \) is 1
(B) all the carry bits (\( C_7 \ldots C_0 \)) are 1
(C) \((A_7 B_7 S_7 + \overline{A_7 B_7 S_7})\) is 1
(D) \((A_0 B_0 S_0 + \overline{A_0 B_0 S_0})\) is 1

Answer: (C)

20. Consider a database that has the relation schema EMP (EmpId, EmpName, and DeptName). An instance of the schema EMP and a SQL query on it are given below:

<table>
<thead>
<tr>
<th>EmpId</th>
<th>EmpName</th>
<th>DeptName</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>XYA</td>
<td>AA</td>
</tr>
<tr>
<td>2</td>
<td>XYB</td>
<td>AA</td>
</tr>
<tr>
<td>3</td>
<td>XYC</td>
<td>AA</td>
</tr>
<tr>
<td>4</td>
<td>XYD</td>
<td>AA</td>
</tr>
<tr>
<td>5</td>
<td>XYE</td>
<td>AB</td>
</tr>
<tr>
<td>6</td>
<td>XYF</td>
<td>AB</td>
</tr>
<tr>
<td>7</td>
<td>XYG</td>
<td>AB</td>
</tr>
<tr>
<td>8</td>
<td>XYH</td>
<td>AC</td>
</tr>
<tr>
<td>9</td>
<td>XYI</td>
<td>AC</td>
</tr>
<tr>
<td>10</td>
<td>XYJ</td>
<td>AC</td>
</tr>
<tr>
<td>11</td>
<td>XYK</td>
<td>AD</td>
</tr>
<tr>
<td>12</td>
<td>XYL</td>
<td>AD</td>
</tr>
<tr>
<td>13</td>
<td>XYM</td>
<td>AE</td>
</tr>
</tbody>
</table>

```sql
SELECT AVG(EC.Num)
FROM EC
WHERE (DeptName, Num) IN
(SELECT DeptName, COUNT(EmpId) AS EC DeptName, Num
FROM EMP
GROUP BY DeptName)
```

© All rights reserved by Thinkcell Learning Solutions Pvt. Ltd. No part of this booklet may be reproduced or utilized in any form without the written permission.
The output of executing the SQL query is _____.

Answer: (2.6) [Click here to watch the video explanation]

21. The following functional dependencies hold true for the relational schema R{V,W,X,Y,Z}:

V → W
VW → X
Y → VX
Y → Z

Which of the following is irreducible equivalent for this set of functional dependencies?

(A) V → W
   V → X
   Y → V
   Y → Z

(B) V → W
   W → X
   Y → V
   Y → Z

(C) V → W
   Y → X
   Y → V
   Y → Z

(D) V → W
   Y → X
   Y → V
   Y → Z

Answer: (A) [Click here to watch the video explanation]

22. Consider the following functions from positive integers to real numbers:

10, √n, n, log_n n, 100/n

The CORRECT arrangement of the above functions in increasing order of asymptotic complexity is:

(A) log_n n, 100/n, 10, √n, n

(B) 100/n, log_n n, 10, √n, n

(C) 10, 100/n, √n, log_n n, n

(D) 100/n, log_n n, 10, √n, n

Answer: (B) [Click here to watch the video explanation]

23. Let T be a tree with 10 vertices. The sum of the degrees of all the vertices in T is ________.

Answer: (18)

24. Let T be a binary search tree with 15 nodes. The minimum and maximum possible heights of T are:

Note: The height of a tree with a single node is 0.
(A) 4 and 15 respectively
(B) 3 and 14 respectively
(C) 4 and 14 respectively
(D) 3 and 15 respectively

Answer: (B)

25. Consider the following C code:

```c
#include <stdio.h>

int * assignval (int *x, int val) {
    *x = val;
    return x;
}

void main ( ){
    int * x = malloc (sizeof (int));
    if (NULL == x) return;
    x = assignval (x, 0);
    if (x) {
        x=(int*) malloc (sizeof (int));
        if (NULL == x) return;
        x = assignval (x, 10);
    }
    printf("%d\n", *x);
    free (x);   }
```

The code suffers from which one of the following problems:

(A) compiler error as the return of malloc is not typecast appropriately.
(B) compiler error because the comparison should be made as x==NULL and not as shown.
(C) compiles successfully but execution may result in dangling pointer.
(D) compiles successfully but execution may result in memory leak.

Answer: (D)
26. Consider a combination of T and D flip-flops connected as shown below. The output of the D flip-flop is connected to the input of the T flip-flop and the output of the T Flip-flop is connected to the input of the D Flip-flop.

Initially, both $Q_0$ and $Q_1$ are set to 1 (before the 1st clock cycle). The outputs

(A) $Q_1Q_0$ after the 3rd cycle are 11 and after the 4th cycle are 00 respectively
(B) $Q_1Q_0$ after the 3rd cycle are 11 and after the 4th cycle are 01 respectively
(C) $Q_1Q_0$ after the 3rd cycle are 00 and after the 4th cycle are 11 respectively
(D) $Q_1Q_0$ after the 3rd cycle are 01 and after the 4th cycle are 01 respectively

Answer: (B)

27. The number of integers between 1 and 500 (both inclusive) that are divisible by 3 or 5 or 7 is __________.

Answer: (271)

28. Consider a RISC machine where each instruction is exactly 4 bytes long. Conditional and unconditional branch instructions use PC-relative addressing mode with Offset specified in bytes to the target location of the branch instruction. Further the Offset is always with respect to the address of the next instruction in the program sequence. Consider the following instruction sequence.

<table>
<thead>
<tr>
<th>Instruction No.</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>i</td>
<td>add R2, R3, R4</td>
</tr>
<tr>
<td>i +1</td>
<td>sub R5, R6, R7</td>
</tr>
<tr>
<td>i + 2</td>
<td>cmp R1, R9, R10</td>
</tr>
<tr>
<td>i + 3</td>
<td>beq R1, Offset</td>
</tr>
</tbody>
</table>
If the target of the branch instruction is i, then the decimal value of the Offset is __________.

Answer: (-16)

29. Consider the C functions foo and bar given below:

```c
int foo (int val ) {
    int x = 0;
    while (val> 0) {
        x = x + foo ( val --);
    }
    return val ;
}
int bar (int val ) {
    int x = 0;
    while (val> 0) {
        x = x + bar (val - 1) ;
    }
    return val ;
}
```

Invocations of foo (3) and bar (3) will result in:

(A) Return of 6 and 6 respectively.
(B) Infinite loop and abnormal termination respectively.
(C) Abnormal termination and infinite loop respectively.
(D) Both terminating abnormally

Answer: (C)

30. In a RSA cryptosystem a participant A uses two prime numbers p = 13 and q =17 to generate her public and private keys. If the public key of A is 35. Then the private key of A is __________.

Answer: (11)
31. Let A be an array of 31 numbers consisting of sequence of 0’s followed by a sequence of 1’s. The problem is to find the smallest index i that A[i] is 1 by probing the minimum numbers of locations in A. The worst case number of probes performed by an optimal algorithm is _____________.

Answer: (5)  
Click here to watch the video explanation

32. If G is grammar with productions

\[ S \rightarrow SaS \mid aSb \mid bSa \mid bSS \]

where S is the start variable, then which one of the following is not generated by G?

(A) abab  
(B) aaab  
(C) abbaa  
(D) babba

Answer: (D)  
Click here to watch the video explanation

33. The value of \( \lim_{x \to 1} \frac{x^7 - 2x^5 + 1}{x^3 - 3x^2 + 2} \)

(A) is 0  
(B) is \(-1\)  
(C) is 1  
(D) does not exist

Answer: (C)  
Click here to watch the video explanation

34. Instructions execution in a processor is divided into 5 stages. Instruction Fetch (IF), Instruction Decode (ID), Operand Fetch (OF), Execute (EX), and Write Back (WB), These stages take 5, 4, 20, 10 and 3 nanoseconds (ns) respectively. A pipelined implementation of the processor requires buffering between each pair of consecutive stages with a delay of 2ns. Two pipelined implementations of the processor are contemplated.

(i) a naïve pipeline implementation (NP) with 5 stages and

(ii) an efficient pipeline (EP) where the OF stage id divided into stages OF1 and OF2 with execution times of 12 ns and 8 ns respectively.

The speedup (correct to two decimals places) achieved by EP over NP in executing 20 independent instructions with no hazards is ________________.

Answer: (1.508)  
Click here to watch the video explanation

35. Consider a database that has the relation schemas EMP(EmpId, EmpName, DepId). And DEPT(DeptName, DeptId). Note that the DeptId can be permitted to be NULL in the relation EMP. Consider the following queries on the database expressed in tuple relational calculus.
Which of the above queries are safe?

(A) (I) and (II) only
(B) (I) and (III) only
(C) (II) and (III) only
(D) (I), (II) and (III)

Answer: (D)

36. Recall that Belady’s anomaly is that the pages-fault rate may increase as the number of allocated frames increases. Now consider the following statements:

$S_1$: Random page replacement algorithm (where a page chosen at random is replaced) suffers from Belady’s anomaly

$S_2$: LRU page replacement algorithm suffers from Belady’s anomaly

Which of the following is CORRECT?

(A) $S_1$ is true, $S_2$ is true
(B) $S_1$ is true, $S_2$ is false
(C) $S_1$ is false, $S_2$ is true
(D) $S_1$ is false, $S_2$ is false

Answer: (B)

37. The output of executing the following C program is ________.

```c
#include <stdio.h>

int total (int v) {
    while (v) {
        count += v & 1;
        v >>= 1;
    }
    return count;
}

void main ( ) {
    static int x = 0;
    int i = 5;
    for (; i > 0; i--) {
        x = x + total (i);
    }
}
```
38. Consider the following C program.

```c
#include <stdio.h>
#include<string.h>

void printlength (char *s, char *t) {
    unsigned int c = 0;
    int len = ((strlen(s) - strlen(t)) > c) ? strlen(s) : strlen(t);
    printf (“%d
”, len);
}

void main ( ) {
    char *x = “abc”; 
    char *y =”defgh”;
    printlength (x,y);
}
```

Recall that strlen is defined in string.h as returning a value of type size_t, which is an unsigned int. The output of the program is _____________.

Answer: (3)  

Click here to watch the video explanation

39. Consider the following languages over the alphabet \(\Sigma = \{a,b,c\}\)

Let \(L_1 = \{a^m b^n c^n | m, n \geq 0\}\) and \(L_2 = \{a^m b^n c^n | m, n \geq 0\}\)

Which of the following are context-free languages?

I. \(L_1 \cup L_2\)
II. \(L_1 \cap L_2\)

(A) I only  (B) II only  (C) I and II  (D) Neither I nor II

Answer: (A)  

Click here to watch the video explanation
40. Consider a 2-way set associative cache with 256 blocks and uses LRU replacement. Initially the cache is empty. Conflict misses are those misses which occur due the contention of multiple blocks for the same cache set. Compulsory misses occur due to first time access to the block. The following sequence of accesses to memory blocks.

\[(0, 128, 256, 128, 0, 128, 256, 128, 1, 129, 257, 129, 1, 129, 257, 129)\]

is repeated 10 times. The number of conflict misses experienced by the cache is \(\text{__________}\).

Answer: \(76\)  
Click here to watch the video explanation

41. Let \(u\) and \(v\) be two vectors in \(\mathbb{R}^2\) whose Euclidean norms satisfy \(\|u\| = 2\|v\|\). What is the value of \(\alpha\) such that \(w = u + \alpha v\) bisects the angle between \(u\) and \(v\) ?

(A) 2  
(B) 1/2  
(C) 1  
(D) -1/2

Answer: \(A\)  
Click here to watch the video explanation

42. Consider the following grammar:

\[
\begin{align*}
\text{stmt} & \rightarrow \text{if expr then else expr; stmt} | \text{O} \\
\text{expr} & \rightarrow \text{term relopterm} | \text{term} \\
\text{term} & \rightarrow \text{id | number} \\
\text{if} & \rightarrow \text{a | b | c} \\
\text{number} & \rightarrow [0-9]
\end{align*}
\]

Where \(\text{relo}\) is a relational operator (e.g., <, >, ...). \(\text{O}\) refers to the empty statement, and \(\text{if} \), \(\text{then} \), \(\text{else} \) are terminals.

Consider a program \(P\) following the above grammar containing ten \(\text{if}\) terminals. The number of control flows paths in \(P\) is \(\text{__________}\). For example the program

\(\text{if } e_1 \text{ then } e_2 \text{ else } e_3\)

has 2 controls flow paths \(e_1 \rightarrow e_2 \) and \(e_1 \rightarrow e_3\).

Answer: \(1024\)

43. In a database system, unique time stamps are assigned to each transaction using Lamport’s logical clock. Let \(TS(T_1)\) and \(TS(T_2)\) be the timestamps of transactions \(T_1\) and \(T_2\) respectively. Besides, \(T_1\) holds a lock on the resource \(R\), and \(T_2\) has requested a conflicting lock on the same resource \(R\). The following
algorithm is used to prevent deadlocks in the database system assuming that a killed transaction is restarted with the same timestamp.

\[
\text{if } TS(T_j) < TS(T_i) \text{ then }
\]
\[
T_j \text{ is killed}
\]
\[
\text{else } T_j \text{ waits.}
\]

Assume any transactions that is not killed terminates eventually. Which of the following is TRUE about the database system that uses the above algorithm to prevent deadlocks?

(A) The database system is both deadlock-free and starvation-free.

(B) The database system is deadlock-free, but not starvation-free.

(C) The database system is starvation-free but not deadlock-free.

(D) The database system is neither deadlock-free nor starvation-free.

Answer: (A)

44. Let A and B be infinite alphabets and let # be a symbol outside both A and B. Let \( f \) be a total functional from \( A^* \) to \( B^* \). We say \( f \) is computable if there exists a Turning machine M which given an input \( x \in A^* \), always halts with \( f(x) \) on its tape. Let \( L_f \) denote the language \( \{x \# f(x) \mid x \in A^* \} \). Which of the following statements is true:

(A) \( f \) if computable if and only if \( L_f \) is recursive.

(B) \( f \) is computable if and only \( L_f \) recursively enumerable.

(C) If \( f \) is computable then \( L_f \) is recursive, but not conversely.

(D) If \( f \) is computable then \( L_f \) is recursively enumerable, but not conversely.

Answer: (A)

45. Consider the expression \((a-1)((b+c)/3)+d)\). Let \( X \) be the minimum number of registers required by an optimal code generation (without any register spill) algorithm for a load/store architecture in which

(i) only loads and store instructions can have memory operands and

(ii) arithmetic instructions can have only register or immediate operands.

The value of \( X \) is _________.

Answer: (2)
46. Let \( G = (V, E) \) be any connected undirected edge-weighted graph. The weights of the edges in \( E \) are positive and distinct. Consider the following statements:

I. Minimum spanning tree of \( G \) is always unique.

II. Shortest path between any two vertices of \( G \) is always unique.

Which of the above statements is/are necessarily true?

(A) I only  
(B) II only  
(C) Both I and II  
(D) Neither I nor II

Answer: (A)

47. A multithreaded program \( P \) executes with \( x \) number of threads and uses \( y \) number of locks for ensuring mutual exclusion while operating on shared memory locations. All locks in the program are non-reentrant, i.e., if a thread holds a lock \( l \), then it cannot re-acquire lock \( l \) without releasing it. If a thread is unable to acquire a lock, it blocks until the lock becomes available. The \textit{minimum} value of \( x \) and the \textit{minimum} value of \( y \) together for which execution of \( P \) can result in a deadlock are:

(A) \( x = 1, y = 2 \)  
(B) \( x = 2, y = 1 \)  
(C) \( x = 2, y = 2 \)  
(D) \( x = 1, y = 1 \)

Answer: (D)

48. The values of parameters for the Stop-and–Wait ARQ protocol are as given below:

- Bit rate of the transmission channel = 1Mbps
- Propagation delay from sender to receiver = 0.75 ms
- Time to process a frame = 0.25ms
- Number of bytes in the information frame = 1980
- Number of bytes in the acknowledge frame = 20
- Number of overhead bytes in the information frame = 20

Assume that there are no transmission errors. Then the transmission efficiency (expressed in percentage) of the Stop-and–Wait ARQ protocol for the above parameters is ________(correct to 2 decimal places)

Answer: (89.33)
49. A computer network uses polynomials over \( GF(2) \) for error checking with 8 bits as information bits and uses \( x^3 + x + 1 \) as the generator polynomial to generate the check bits. In this network, the message 01011011 is transmitted as

(A) 01011011010  
(B) 01011011011  
(C) 01011011101  
(D) 01011011100

Answer: (C)

50. Let \( p, q, \) and \( r \) be propositions and the expression \( (p \rightarrow q) \rightarrow r \) be a contradiction. Then, the expression \( (r \rightarrow p) \rightarrow q \) is

(A) a tautology  
(B) a contradiction  
(C) always TRUE when \( p \) is FALSE  
(D) always TRUE when \( q \) is TRUE

Answer: (D)

51. A cache memory unit with capacity of \( N \) words and block size of \( B \) words is to be designed. If it is designed as a direct mapped cache, the length of the TAG field is 10 bits. If the cache unit is now designed as a 16-way set-associative cache, the length of the TAG field is ______ bits.

Answer: (14)

52. Consider the following two functions.

```c
void fun1 (int n) {
    if (n == 0) return;
    printf ("%d", n);
    fun2 (n - 2);
    printf ("%d", n);
}

void fun2 (int n) {
    if (n == 0) return;
    printf ("%d", n);
    fun1(++n);
    printf ("%d", n);
}
```

Click here to watch the video explanation
The output printed when fun1 (5) is called is

(A) 53423122233445  (B) 53423120112233
(C) 53423122132435  (D) 53423120213243

Answer:  (A)

53. Consider a database that has the relation schema CR (StudentName, CourseName). An instance of the schema CR is as given below.

<table>
<thead>
<tr>
<th>CR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Student Name</td>
</tr>
<tr>
<td>SA</td>
</tr>
<tr>
<td>SA</td>
</tr>
<tr>
<td>SA</td>
</tr>
<tr>
<td>SB</td>
</tr>
<tr>
<td>SB</td>
</tr>
<tr>
<td>SC</td>
</tr>
<tr>
<td>SC</td>
</tr>
<tr>
<td>SC</td>
</tr>
<tr>
<td>SD</td>
</tr>
<tr>
<td>SD</td>
</tr>
<tr>
<td>SD</td>
</tr>
<tr>
<td>SD</td>
</tr>
<tr>
<td>SE</td>
</tr>
<tr>
<td>SE</td>
</tr>
<tr>
<td>SE</td>
</tr>
<tr>
<td>SF</td>
</tr>
<tr>
<td>SF</td>
</tr>
<tr>
<td>SF</td>
</tr>
</tbody>
</table>

The following query is made on the database.

\[ T1 \leftarrow \pi_{\text{Course Name}} \left( \sigma_{\text{Student Name} = \text{SA}}(\text{CR}) \right) \]

\[ T2 \leftarrow \text{CR} \div T1 \]

The number of rows in T2 is ____________.

Answer:  (4)
54. Let $A$ be an $n \times n$ real valued square symmetric matrix of rank 2 with $\sum_{i=1}^{n} \sum_{j=1}^{n} A_{ij}^2 = 50$. Consider the following statements.

(I) One eigen value must be in $[-5, 5]$.

(II) The eigen value with the largest magnitude must be strictly greater than 5.

Which of the above statements about eigen values of $A$ is/are necessarily CORRECT?

(A) Both (I) and (II)  
(B) (I) only  
(C) (II) only  
(D) Neither (I) nor (II)  

Answer: (B)  
Click here to watch the video explanation

55. Consider the context-free grammars over the alphabet $\{a, b, c\}$ given below. $S$ and $T$ are non-terminals.

$G_1: S \rightarrow aSa | T, T \rightarrow cT$  
$G_2: S \rightarrow bSa | T, T \rightarrow cT$  

The language $L(G_1) \cap L(G_2)$ is

(A) Finite.  
(B) Not finite but regular.  
(C) Context-free but not regular.  
(D) Recursive but not context-free.  

Answer: (B)
